

# SLC2A14 – Top 10 Enrichments – SMART

Description

14–3–3 homologues

Rho (Ras homology) subfamily of Ras-like  
small GTPases

ATPases associated with a variety of  
cellular activities

Phosphoglycerate mutase family

These are enzymes that catalyze  
nonsubstrate specific conversions of  
nucleoside diphosphates to nucleoside  
triphosphates. These enzymes play  
important roles in bacterial growth,  
signal transduction and pathogenicity.
